DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Davidson et al. (Davidson) (USPN 6,952,485).

With regard to claim 1, Davidson discloses a print system (column 1, lines 58-60) comprising: a plurality of printers each having information identifying the printer (column 2, lines 11-20), a host section that transmits print data to the plurality of printers to instruct the printers to carry out printing (column 2, lines 13-20), a discharge portion to which prints from each printer are discharged, a printer particular information providing device with which during printing, the printer provides, on each print to be discharged from the discharge portion, particular information indicating which printer has produced the print (column 2, lines 4-30).

With regard to claim 2, Davidson discloses wherein each of the printers determines a position at which the particular information is to be provided, from

the size of the print data transmitted to the printer (column 2, lines 13-20, lines 35-38 and column 10, lines 20-63).

With regard to claim 3, Davidson discloses wherein the particular information is a printed indication on printed surface of the print, and the printer analyzes print data present around the determined particular information provided position and applies, on the basis of results of the analysis, an indication which is less noticeable than the print data present around the determined particular information provided position but which can still be visually discovered (column 4, lines 39-63).

With regard to claim 4, Davidson discloses wherein the position at which the particular information is provided varies with the printers, and each of the printers determines a position at which the particular information is to be provided on the basis of the information identifying the printer (column 10, lines 45-63).

With regard to claim 5, Davidson discloses wherein the particular information is a printed indication on end portion of the printed surface of the print (column 10, lines 45-63).

With regard to claim 6, Davidson discloses wherein said indication comprises dots and said print data present around comprises data of dots present around which are printed around the dots (column 4, lines 16-29).

With regard to claim 7, Davidson discloses wherein a gradation value for the dots is value deviating from an average value for the dot gradation value of the dots present around by about 128 gradations (column 4, lines 16-20).

With regard to claim 8, Davidson discloses a printer (column 3, lines 22-25) comprising: an analyzing device analyzing print data, and an indication providing device which provides an indication which is unnoticeable but can still be visually discovered, on a print to be produced, on the basis of results of the analysis (column 4, lines 30-63 and column 10, lines 45-63).
